EXPANDING TREATMENT OPTIONS

Unlocking the Potential of Treating Cancers That Involve the PI3K/mTOR Pathway

June 2024

## **Forward-Looking Statements**

This presentation contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 relating to our business, operations, and financial condition, including but not limited to current beliefs, expectations and assumptions regarding the future of our business, future plans and strategies, our development plans, our preclinical and clinical results and expected timing thereof, our plans to develop and commercialize gedatolisib, our first internally developed drug candidate, our plans to research, discover and develop additional product candidates, our planned milestones and timing of achieving such milestones, the focus and design of our clinical development program, our expectations regarding the timeline of patient enrollment, and receiving results and data, from clinical trials, including our existing Phase 3 VIKTORIA-1 and VIKTORIA-2 clinical trials and Phase 1b/2 study and clinical trial for gedatolisib, any potential benefits resulting from Breakthrough Therapy designation for gedatolisib, and other expectations with respect to Celcuity's lead product candidate, gedatolisib, the estimated costs of our clinical trials, our expectations as to the use of proceeds from our recent financing activities and the adequacy of cash to fund operations, and our beliefs related to the perceived advantages of our CELsignia tests compared to traditional molecular or other diagnostic tests and its CELsignia platform. Words such as, but not limited to, "look forward to," "believe," "expect," "anticipate," "estimate," "intend," "plan," "would," and "could," and similar expressions or words, identify forward-looking statements.

Any forward-looking statements in this presentation are based on management's current expectations and beliefs and are subject to a number of risks, uncertainties and important factors that may cause actual events or results to differ materially from those expressed or implied by any forward-looking statements contained in this presentation, including, without limitation, risks relating to: (i) unforeseen delays in clinical trial enrollment or other activities that may affect the timing and success of our current and anticipated clinical trials, (ii) the fact that preliminary data from a clinical study may not be predictive of the final results of such study or the results of other ongoing or future studies or trials, (iii) our ability to obtain and maintain FDA approval to commercialize gedatolisib, and the market acceptance of a commercialized product, (iv) our ability to raise additional capital for further product development and other activities, (v) the development of products or services competitive with our products, including without limitation, other effective drug candidates, diagnostic tests and treatment options, (vi) our dependence on intellectual property licenses and other third-party relationships, (vii) our ability to obtain and maintain intellectual property protection for our technology and time and expense associated with defending third-party claims of intellectual property infringement, investigations or litigation threatened or initiated against us, (viii) difficulties we may face in managing growth, such as hiring and retaining a qualified sales force and attracting and retaining key personnel, and (ix) uncertainties and assumptions regarding the impact of macro-economic conditions and global risks on our business, operations, clinical trials, supply chain, strategy, goals and anticipated timelines.

Because forward-looking statements are inherently subject to risks and uncertainties, some of which cannot be predicted or quantified and some of which are beyond our control, you should not rely on these forward-looking statements as predictions of future events. In our reports and filings with the SEC, including our Annual Report on Form 10-K for the year ended December 31, 2023, we present more information about the risks and uncertainties applicable to our business. New risks and uncertainties may emerge from time to time, and it is not possible to predict all risks and uncertainties. Except as required by applicable law, we do not plan to publicly update or revise any forward-looking statements contained herein, whether as a result of any new information, future events, changed circumstances or otherwise.

The information in this presentation does not provide full disclosure of all material facts relating to Celcuity, its securities or the proposed offering of its securities. This presentation shall not constitute an offer to sell or the solicitation of an offer to buy any securities.

## **The Celcuity Opportunity**

Significant untapped potential to effectively treat PAM pathway involved cancers

• Gedatolisib's differentiated MOA and PK profile result in a highly potent, cytotoxic, and well tolerated PAM inhibitor

Very compelling data in 1L (mPFS 48 months) and 2L (mPFS 12.9 months) patients with HR+/HER2- ABC
A Phase 3 study in 2L patients is enrolling and a Phase 3 study in 1L patients is expected to begin enrolling in Q2 2025

- 3
- Strong scientific rationale to develop gedatolisib for prostate cancer indications
- Parallels between breast and prostate cancer interdependent activity between PAM pathway and hormonal pathways

- Uniquely positioned to advance multiple potential blockbuster indications in breast and prostate cancer
- Pro forma cash, cash equivalents and short-term investments of \$293M as of Q1 expected to fund operations through 2026<sup>1</sup>

## Unlocking the Potential of Treating Cancers That Involve the PI3K/AKT/mTOR Pathway

One of the most important oncogenic pathways	Most highly altered of all signaling pathways <sup>1</sup>			Largest untapped drug development opportunity in solid tumors
PI3K/AKT/mTOR (PAM) regulates key metabolic functions	Proportion of alterations correlates to pathway's role as a cancer driver		Breast and prostate cancers involve PAM pathway • >500,000 addressable patient	
Plays a key role promoting tumor cell proliferation	<b>PAM</b> RAS	<b>38%</b> 15%		<ul><li>population in US, 5EU, and Japan</li><li>Nominal penetration of PAM drugs</li></ul>
<ul> <li>Cross-regulates other oncogenic pathways</li> <li>Affects immune response by regulating tumor microenvironment</li> </ul>	HER2 EGFR	8% 5%		in these markets

celcuity

EXPANDING TREATMENT OPTION:

## Difficult to Safely and Efficaciously Inhibit PI3K/mTOR

Maximum efficacy requires inhibition of all Class I PI3K isoforms and mTORC1 and mTORC2

## The PAM Pathway is the Most Underdeveloped Target in Solid Tumors

Drug revenues from PAM inhibitors are a small fraction of other targeted therapy classes

#### PAM potential patient population is not tumor specific like CDK4/6 or AR inhibitors

## Gedatolisib is a Potential First-in-Class PI3K/mTOR Inhibitor

Breakthrough Therapy Designation granted for 2L HR+/HER2- advanced breast cancer indication

Highly Differentiated Mechanism	Compelling Results	Well-Tolerated	Addressing Large Patient Populations
<ul> <li>Inhibits all PI3K/mTOR nodes at low or sub- nanomolar concentrations</li> <li>More potent &amp; cytotoxic than other PAM inhibitors being developed for breast or prostate cancer</li> </ul>	<ul> <li>Gedatolisib + ET + CDK4/6 in HR+/HER2- ABC patients</li> <li>79% ORR, 48.6 months mPFS in 1L patients<sup>1</sup></li> <li>63% ORR, 12.9 months mPFS in 2L patients<sup>2</sup></li> </ul>	<ul> <li>Nominal Gr 3, no Grade 4 TEAE's as a single agent</li> <li>Only 4% treatment discontinuation due to AE with Phase 3 dosing in combination with palbociclib and fulvestrant<sup>2</sup></li> </ul>	<ul> <li>HR+/HER2- ABC: Enrolling Phase 3 trial for 2L and expect to begin enrolling Phase 3 trial for 1L in Q2 '25</li> <li>mCRPC: Enrolling Phase 1b/2 trial for 1L/2L patients</li> <li>225,000 1L/2L patients in US, EU5, Japan<sup>3</sup></li> </ul>

(1) Rugo ESMO 2023); (2) Data from Expansion Arm D of the B2151009 clinical trial (Layman, Lancet Oncology 2024); includes 2 unconfirmed partial responses; (3) Salvi, The Breast, 2021; Globocan 2020; Abbreviations: ORR = objective response rate; mPFS = median progression free survival;  $1L = 1^{st}$  line;  $2L = 2^{nd}$  line; TEAE = Treatment emergent adverse event; AE = adverse events; ABC = advanced breast cancer; mCRPC = metastatic castration resistant prostate cancer; 5EU = France, Germany, Italy, Spain, UK

## **Gedatolisib Has a Highly Differentiated Mechanism of Action and Potency**

Results in superior cytotoxicity vs. single node PAM inhibitors

Cell	-Free blochen	ICal Dose IC <sub>50</sub> (nM) <sup>1</sup>	Response An	aiysis
Node	Gedatolisib <sup>2</sup>	Alpelisib <sup>3</sup>	Everolimus <sup>4</sup>	Capivasertib⁵
ΡΙ3Κ-α	0.6	~4.0	-	-
ΡΙ3Κ-β	6.0	1,156	-	-
ΡΙ3Κ-γ	5.4	250	-	-
ΡΙ3Κ-δ	6.0	290	-	-
mTORC1	1.6	-	~2.0	-
mTORC2	1.6	-	-	-
AKT	_6	-	-	3.0

Coll-Fron Biochamical Doso Posponso Analysis

Gedatolisib is potent against all Class I PI3K isoforms & mTORC1/2

- Limits cross-activation that occurs with node-specific drugs
- Gedatolisib is more potent against each node than other PAM inhibitors
- 70-100x more potent than capivasertib against targets downstream of AKT<sup>6</sup>
- Comprehensive pathway blockade can induce anti-tumor activity independent of PIK3CA status

### Live Cell Proliferation Rate Dose Response Analysis<sup>7</sup>

Average values for 14 PIK3CA MT and 14 PIK3CA WT breast cancer cell lines

Gedatolisib is highly potent and cytotoxic in vitro

- Significantly more potent and cytotoxic than other PAM inhibitors in vitro
  - > 300X higher potency
  - 1.5x 2.8x higher cytotoxicity
- Only PAM inhibitor with similar activity in PIK3CA MT and WT

Celcuity EXPANDING TREATMENT OPTIONS (1) IC50 derived from cell-free biochemical dose response analysis; (2) Venkatesan 2010 J Med Chem 53(6):2636-45. Footnote: Growth rate (GR) was assessed using 28 cell lines by measuring live cells reducing potential with Real Time-Glo MT luciferase assay before and after 72h drug treatment. GR50 (conc required to inhibit growth rate by 50%) is a measure of potency. GR-Max (GR at highest drug conc. tested ) is a measure of efficacy. Hafner et al, Nat. Methods, 2016 (Sorger lab, Harvard); NIH LINCS program.

## **Gedatolisib PK Properties and IV Administration Optimize Safety Profile**

Lower toxicity vs. approved PI3K inhibitors

	Gedatolisib <sup>1</sup>	Alpelisib <sup>2,3</sup>	Copanlisib <sup>3</sup>	Duvelisib <sup>3</sup>	Idelalisib <sup>3</sup>
Target(s)	Pan-PI3K mTOR	ΡΙ3Κ-α	Pan-PI3K	ΡΙ3Κ-δ	ΡΙ3Κ-δ
Administration	IV	Oral	IV	Oral	Oral
Dosing (mmol/month)	0.88	19.03	0.37	3.22	20.22
Volume of distribution (L)	39	114	871	29	23
Hyperglycemia (G 3/4)	1%	26%	41%	-	-
Treatment related SAE's	2%	10%	26%	65-73%	50-77%
Treatment related (TR) Discontinuations	0%	13%	16%	35%	17-53%

Gedatolisib vs. PI3K-α and pan-PI3K drugs (single-agents)

 $\circ$  >95% lower rate of Grade 3/4 hyperglycemia

- Due to gedatolisib's lower liver exposure
- Alpelisib dosage 22x > gedatolisib
- Copanlisib 50x > retention liver vs plasma

 $\circ$  >80% lower rate of TR discontinuations

o 3x-20x more balanced distribution

### Gedatolisib vs. PI3K-δ drugs (single-agents)

- o 73%-97% lower dosage (molar/month)
- No direct GI exposure
- $\circ\,$  Minimal GI, liver, and infection-related AE's

(1) Shapiro 2015, internal data on file; 154 mg weekly dose (MTD); all AE refers to related AEs; (2) Juric 2018, hyperglycemia from 300 mg daily dose arms (MTD); SAE and related treatment related discontinuation data from all arms; (3) US Package Insert; Note: No head-to-head trials have been conducted; data collected from different trials, in different patient populations and may not be comparable. Abbreviations: G, Grade; SAE, serious adverse event; mmol = miliimolar; L = liter

### **Gedatolisib Single Agent Safety Profile**

Phase 1 Trial: gedatolisib at maximum tolerated dose (MTD) - 154 mg weekly (IV)<sup>1</sup>

### Limited incidence of Grade 3 adverse events

- The most frequent AE, stomatitis, is manageable with prophylactic steroidal mouth rinse
  - Stomatitis was not treated prophylactically in this study
  - Prophylactic treatment may reduce G2 incidence by 90%; G3 by 100%<sup>2</sup>
  - All current studies prescribe prophylaxis
- Low incidence of Grade 3 hyperglycemia (1%)
- No treatment related neutropenia
- No Grade 4 or 5 adverse events

celcuity

### MTD Arm (n=42)

Related TEAE's > 20%							
	Grade 1 Grade 2 Grade 3/4						
Adverse Event	%	%	%				
Stomatitis	45	2	7				
Nausea	36	2	2				
Hyperglycemia	17	7	1				
Vomiting	19	2	2				
Asthenia	7	12	2				
Fatigue	19	2	-				
Appetite decrease	14	7	-				

### Safety Data for Gedatolisib vs. Single Node PAM Inhibitors

Fewer patients reported AE when treated with gedatolisib compared to other PAM inhibitors

Source for all data except Hyperglycemia (Glucose Increased) from single agent studies: Source: (GED) Shapiro 2015, internal data. (ALP) Juric 2018, 300 mg daily dose; (EVE) Tabernero JCO 2008, 10 mg QD or 50 mg QW; (CAP) Hyman JCO 2017; Source for Hyperglycemia (Glucose Increases) data: ALP, EVE, CAP: US Package Insert. GED: Layman Lancet 2024. Note: Hyperglycemia (Glucose Increased) is a laboratory abnormality graded according to specific fasting glucose values whereas Hyperglycemia (Adverse Event) is graded according to a clinical assessment

## Clinical Development Programs Current

### 2<sup>nd</sup> Line HR+/HER2- Advanced Breast Cancer

### Phase 3 clinical trial for gedatolisib with fulvestrant +/- palbociclib is enrolling

- Patients with HR+/HER2- advanced breast cancer (ABC) who progressed on CDK4/6 therapy<sup>1</sup>
- All-comer design (*PIK3CA+/-*) includes separate primary endpoints for mutated and non-mutated *PIK3CA* patients
- Breakthrough Therapy Designation was granted by the FDA in July 2022

celcuity

### 1<sup>st</sup> Line HR+/HER2- Advanced Breast Cancer

- Phase 3 clinical trial for gedatolisib + CDK4/6 inhibitor + fulvestrant
- Patients with HR+/HER2- ABC who are endocrine therapy resistant (ETR) and treatment naïve for ABC
- All-comer design (*PIK3CA+/-*) includes separate primary endpoints for mutated and non-mutated *PIK3CA* patients
- Significant unmet need mPFS with SOC is approximately 7 months<sup>1</sup>

### 2<sup>nd</sup> Line Metastatic Castration Resistant Prostate Cancer

## Phase 1b/2 clinical trial for gedatolisib with darolutamide is enrolling

- Extensive literature describes androgen pathway linkage to the PAM pathway
- Gedatolisib demonstrated superior potency and efficacy compared to other PAM inhibitors in nonclinical studies<sup>2</sup>
- Promising clinical activity with an AR inhibitor when combined with less active PAM inhibitors than gedatolisib<sup>3</sup>

### **Addressable Patient Population in Breast and Prostate Cancer**

Gedatolisib for Advanced Breast Cancer (ABC)

### ER, CDK4/6, & PI3K/mTOR are Interdependent Drivers of HR+/HER2- ABC

Dysregulation of these pathways promotes excessive cell proliferation and resistance to apoptosis

### ER and PI3K/mTOR

- Activation of the PI3K/mTOR pathway induces estrogen independent ER transcriptional activity by mTOR
- Conversely, ER target gene expression activates upstream effectors of the PI3K/mTOR pathway
- ER also activates the PI3K/mTOR pathway by direct binding to PI3Kα
- PI3K/mTOR inhibition increases ER activity which increases sensitivity to endocrine therapy

### CDK4/6, ER and PI3K/mTOR

- Estrogen promotes cyclin D1 transcription and cyclin D1 can cause estrogen independent transcription
- Provides rationale for simultaneously inhibiting ER and CDK4/6
- CDK4/6 inhibition causes incomplete cell cycle arrest – addition of PI3K/mTOR inhibition enables more complete arrest
- PI3K/mTOR inhibition increases cyclin D1 activity which increases sensitivity to CDK4/6 inhibition

Alves, Int J Mol. Sci. 2023

## HR+/HER2- Breast Cancer Treatment Landscape<sup>1</sup>

~30,000 women in US and ~33,000 women in 5EU and Japan die from breast cancer annually<sup>2</sup>

(1) NCCN Guidelines for Breast Cancer 2023; (2) American Cancer Society, Breast Cancer Statistics 2022; American Cancer Society Facts and Figures 2019-2020; Note: EU5 + Japan calculated using 112% EU + Japan scale up factor; Abbreviations: HR, hormone receptor; ET, endocrine therapy; AI, aromatase inhibitor; i, inhibitor; Tx, targeted therapy

### **Limited** Benefit for 1<sup>st</sup> Line ET Resistant or 2nd Line HR+/HER2- ABC Patients

Significant need for better therapeutic options

(1) Finn NEJM 2016; Rugo H, et al. Breast Cancer Res Treat, 2019; (2) Hortobagyi NEJM 2016; Hortobagyi Ann Oncol 2018; USPI; (3) Jhaveri SABCS 2023 (4) Rugo Lancet Onco 2021; (5) Oliveira, ESMO Breast, 2023, CDK4/6 prior treated patients (6) Bidard, JCO, 2022 and FDA. Note: All drugs listed are FDA approved 18

## **Review of Phase 1b Data**

Gedatolisib + Palbociclib + Fulvestrant/Letrozole

### **Treatment Strategy: Simultaneous Blockade of PAM, ER, & CDK4/6 Pathways**

### **Treatment Rationale**

- Blockade of interdependent ER, PI3K, mTOR & CDK signaling pathways is required to optimize anti-tumor control
- PAM inhibition:
  - Blockades pathway and limits activation when ER or CDK4/6 is inhibited
  - Increases ER activity which increases sensitivity to endocrine therapy
  - Increases cyclin D1 activity which increases sensitivity to CDK4/6 inhibition

## B2151009: Phase 1b Study (138 patients)

Provided Data in Treatment Naïve and Prior CDK4/6 Treated Patients with HR+/HER2-ABC

## **B2151009 Expansion Arms: Baseline Characteristics**

### Gedatolisib + Palbociclib + Fulvestrant in 2<sup>nd</sup>/3<sup>rd</sup> Line HR+/HER2- ABC Patients

Data from Arm D with Phase 3 regimen compares favorably to published data with current SOC

## B2151009 Arm D: Safety Summary for Phase 3 Dosing

**G + P + F** was well tolerated overall; < 4% discontinuation rate

### Discontinuation of gedatolisib due to AE - <4%

- Alpelisib 26% discontinued <sup>1</sup>
- Everolimus 24% discontinued<sup>2</sup>
- Capivasertib 10% discontinued <sup>3</sup>
- Most TRAE's were Grade 1 or 2
- Few hyperglycemia adverse events
  - Gedatolisib 7% Grade 3/4
  - Alpelisib 37% Grade 3/4<sup>1</sup>
- · Stomatitis prophylaxis was not utilized in this study
  - Swish-and-Spit dexamethasone prophylactic mouth rinse reduced Grade 2-4 stomatitis by 90% <sup>4</sup>
  - Phase 3 study prescribes prophylaxis
- Neutropenia, leukopenia, and anemia AE incidence is nearly identical to PALOMA-3 (palbociclib + fulvestrant)

#### Arm D (n=27) Gedatolisib + Palbociclib + Fulvestrant (180 mg IV, 3 weeks on, one week off)

Related TEAE's > 30%						
	Grade 1	Grade 2	Grade 3/4			
Adverse Event	%	%	%			
Stomatitis <sup>5</sup>	11	56	22

No head-to-head trials have been conducted; data collected from different trials, in different patient populations and may not be comparable.

## **Efficacy in Treatment-Naïve Population Superior to SOC**

mPFS of 48.6 months, mDOR of 46.9 months, and ORR of 79%

B2151009 Treatment-Naïve Patients (N=41)								
	Escalation Arm A Expansion Arm A Total Treatment Naïve							
Progression-Free Survival (full analysis set)	n = 11	n = 30	n = 41					
Median PFS, mos (95% CI)	45.8 (32.3, NR)	48.6 (11.6, NR)	48.6 (30.4, NR)					
Responses (evaluable, measurable disease) <sup>1</sup> , n (%)	n = 7	n = 26	n = 33					
CR	0	1 (3.8)	1 (3.0)					
PR	4 (57.1)	21 (80.8)	25 (75.8)					
SD	3 (42.9)	3 (11.5)	6 (18.2)					
Unconfirmed PR	0	0	0					
Durable SD (≥24 weeks)	1 (14.3)	2 (7.7)	3 (9.1)					
PD	0	1 (3.8)	1 (3.0)					
ORR <sup>1</sup>	4 (57.1)	22 (84.6)	26 (78.8)					
Median DOR, mos (95% CI) <sup>2</sup>	39.7 (30.5, NR)	46.9 (11.3, NR)	46.9 (24.6, 49.5)					

Source: Rugo 2023 ESMO Breast. (1) Subjects with measurable disease in response evaluable analysis set per RECIST v1.1;(2) Confirmed responders in the full analysis set. Abbreviations: CR, complete response; DOR, duration of response; mos, months; NR, Not Reached; ORR, objective response rate; PD, progressive disease; PFS, progression free survival; PR, partial response; SD, stable disease

## Gedatolisib + Palbociclib + Letrozole in 1<sup>st</sup> Line HR+/HER2- ABC (N=41)<sup>1</sup>

Combined 1L data from Esc Arm A + Exp Arm A compares favorably to published data for SOC palbociclib + letrozole<sup>2</sup>

(1) Rugo 2023 ESMO-Breast; Escalation Arm A & Expansion Arm A data from B2151009 study; (2) Finn 2016 NEJM – PALOMA-2; (3). Note: (a) ORR reported is for patients with measurable disease of a target lesion. (b) No head-to-head trials have been conducted; data collected from different trials, in different patient populations and may not be comparable.

### **Gedatolisib** Combo vs. SOC for 1L HR+ / HER2- ABC

Gedatolisib Combo Offers Potential for Superior Efficacy Compared to 1L SOC

Sources: (1) Rugo 2023 ESMO-Breast. (2) Rugo H, et al. Breast Cancer Res Treat, 2019; Finn 2016. Abbreviations: mPFS = median progression free survival; ORR = objective response rate. SOC = standard of care. Note: No head-to-head trials have been conducted; data collected from different trials, in different patient populations and may not be comparable.

## Phase 3 Study Designs VIKTORIA-1 and VIKTORIA-2

### VIKTORIA-1: Trial Design Considerations for 2<sup>nd</sup> Line HR+/HER2- ABC

- Standard-of-care 2<sup>nd</sup> line treatment is based on *PIK3CA* status
- •~35% of patients have disease with *PIK3CA* mutations
- PFS is accepted primary end point for randomized studies in ABC

Supports design with multiple primary endpoints in different sub-groups

## VIKTORIA-1: Phase 3 Study Features for 2L HR+/HER2- ABC

Global open-label randomized study (>200 sites)

- Key eligibility criteria:
  - ER+/HER2- advanced or metastatic breast cancer
  - Prior CDK4/6i + NSAI
  - Bone-only with measurable lesions
  - $\leq$  2 prior endocrine therapy
  - No prior chemotherapy for ABC
- Three primary endpoints could support three separate indications
  - Two co-primary endpoints (PFS) in *PIK3CA* WT patients
  - One primary endpoint (PFS) in PIK3CA MT patients
- Three-arm design for *PIK3CA* WT and MT patients enables evaluation of two different regimens
- Stratification by geography, prior treatment response (≤ or > 6 months), presence of liver or lung metastasis (yes/no)

Phase 3 vs. Phase 1b Arm D Key Eligibility Criteria Differences

### Prior chemotherapy for ABC

- Phase 3: 0% (not eligible)
- Arm D: 19% had prior chemo

#### Bone-only with measurable lesions

- Phase 3: Typically, 15%-20% ABC
- Arm D: 0% (not eligible)
- Implications

 Bone only and chemo naïve patients typically have better prognosis than those with visceral disease and prior chemo

### VIKTORIA-1: Phase 3 Trial Design Overview for 2L HR+/HER2- ABC

Celcuity EXPANDING TREATMENT OPTIONS

1) Optional Cross-over to Arm A or Arm B upon progressive disease; WT = wild type; MT = mutant; PFS = progression free survival

## **Relevant Comparisons to VIKTORIA-1 Controls**

B2151009 study results compared to published data for patients who received prior CDK4/6i

	Gedatolisib + Palbociclib + Fulvestrant N=27 <sup>1,2</sup>	Fulvestrant N=165 <sup>3</sup>	Fulvestrant N=121⁵	Alpelisib + Fulvestrant <sub>N=126<sup>7</sup></sub>	Alpelisib + Fulvestrant N=121 <sup>8</sup>
PIK3CA Status	WT / M (56% / 41%)	WT	WT	М	М
Line of Therapy (% by line)	2L / 3L+ (67% / 33%)	2L / 3L+ (73% / 27%) <sup>4</sup>	2L / 3L (NR)	2L / 3L+ (37%/ 63%)	1L / 2L/ 3L+ (12% / 70% / 19%)
mPFS (months)	12.9	1.9	3.5	5.6	7.3
ORR	63% (overall) <sup>2</sup> <u>WT M</u> 60% 73%	NR	14% <sup>6</sup>	22%	17%
PFS % at 12 months	53% (overall) <u>WT M</u> 49% 60%	10%	12%	22%	27%

Sources: (1) Layman, Lancet, 2024; (2) Includes 2 unconfirmed PR.(3) Bidard 2022 – EMERALD trial; (4) 73% of patients had 1 prior line of endocrine therapy and 80% of patients had no prior chemotherapy in the advance setting; (5) Turner, NEJM, 2023, CAPItello-291 trial, mPFS only includes WT patients who had prior CDK4/6 treatment; PFS % at 12 months includes all patients who had prior CDK4/6 treatment; (6) ORR includes unconfirmed responses from all patients treated with fulvestrant, including those who had prior CDK4/6 in those who didn't; (7) Rugo 2021 SABCS (8) Rugo 2021 Lancet. Note: No head-to-head trials have been conducted; data collected from different trials, in different patient populations and may not be comparable.

## VIKTORIA-2: Phase 3 Study Features for 1L HR+/HER2- ABC

Global open-label randomized study (~200 sites)

- Key eligibility criteria:
  - ER+/HER2- advanced or metastatic breast cancer
  - No prior treatment for advanced or metastatic breast cancer
  - Progression or relapse of disease during or within 12 months of completing adjuvant endocrine treatment
  - Pre-diabetic or patients with controlled diabetes allowed
- Investigator's choice of CDK4/6 inhibitor (ribociclib or palbociclib) for investigational and control arm
- Randomizing patients to cohorts based on PIK3CA status (MT or WT); primary analysis for each cohort is independent
- Stratification by primary vs secondary endocrine treatment resistance, site of metastases (bone-only vs other), geographical area (US vs other)

### **Key Considerations**

- 1L endocrine treatment resistant patients receive limited benefit from CDK4/6 + fulvestrant
   mPFS = 7.3M in recent study
- Supports potential indication allowing use of either ribociclib or palbociclib
- Minimizes exclusion of patients based on fasting glucose or HbA<sub>1c</sub> levels
- Independent primary analyses of PIK3CA WT and MT provides two potential opportunities to obtain approval

## VIKTORIA-2: Phase 3 Trial Design Overview for 1L HR+/HER2- ABC

Will conduct small safety run-in with gedatolisib plus ribociclib plus fulvestrant prior to Phase 3

### Plan to enroll first patient Q2 2025

## **Relevant Comparisons to VIKTORIA-2 Control**

B2151009 study results for 1L patients compares favorably to published data for 1L ETS patients

	Gedatolisib + Palbociclib + Letrozole N=41 <sup>1</sup>	Palbociclib + Letrozole N=441 <sup>2</sup>	Palbociclib + Fulvestrant N=164 <sup>3</sup>
PIK3CA Status	WT / M (76% / 22%)	NR	MT (100%)
Endocrine Therapy Sensitivity	Sensitive (ETS)	Sensitive (ETS)	Resistant (ETR)
mPFS (months)	48.6	27.6	7.3
ORR	79%	55%	25%

Sources: (1) Rugo, ESMO-Breast, 2023; (2) Rugo, Palbociclib plus letrozole as 1<sup>st</sup> Line therapy in ER+/HER2- ABC – PALOMA-2; (3) Jhaveri, SABCS 2023. Note: No head-to-head trials have been conducted; data collected from different trials, in different patient populations and may not be comparable.

### **Clinical** Trial Results Provide POC in this 1L ABC Patient Population<sup>1</sup>

Results for a less potent PAM inhibitor in small fraction of population highlights opportunity for gedatolisib

Study Regimens	Line of Therapy	Patient Population	N	Overall Results (Months rPFS)	Comments
Inavolisib (PI3Kα) + Palbociclib + Fulvestrant vs. Palbociclib + Fulvestrant <sup>1</sup>	1 <sup>st</sup> Line	PIK3CA MT+ Progressed on prior adjuvant ET w/in 12 months after last treatment Fasting glucose <126 mg/dL and HbA <sub>1C</sub> <6.0%	325	<b>15.0 vs. 7.3 months</b> (HR = 0.43; P<0.0001)	<ul> <li>Inavolisib shows clinical activity despite only targeting PI3Kα</li> <li>Gedatolisib 5X-10X more potent in vitro than inavolisib<sup>2</sup></li> <li>Indication excludes ~80% of eligible patients <ul> <li>No PIK3CA WT (65% of total ABC)</li> <li>No pre-diabetics or controlled diabetics (40% of PIK3CA MT)</li> </ul> </li> <li>Gedatolisib has reported favorable preliminary results in total eligible population in both 1L and 2L patients</li> </ul>

# Gedatolisib for Prostate Cancer

## Androgen Signaling is the Key Driver of Prostate Cancer

The PI3K/AKT/mTOR (PAM) pathway helps promote excessive cell proliferation and resistance to apoptosis

#### The AR Pathway is the Primary Therapeutic Target

- The androgen receptor (AR) drives the expression of target genes which promote cancer cell survival and growth
- The androgen signaling pathway is the primary therapeutic target for prostate cancer at all stages of disease
- Androgen deprivation therapies (ADT) are used primarily for localized disease
- Second generation AR inhibitors are used for advanced disease

#### The PAM Pathway Plays a Key Role in mCRPC

- AR and PI3K-AKT-mTOR pathways crossregulate each other.
- 70% 100% of mCRPC tumors have PI3K/AKT/mTOR related pathway alterations.
- Mutations dispersed across PTEN, PI3K, AKT, and mTOR sub-units

### **Prostate Cancer Disease and Treatment Landscape**<sup>1,2</sup>

34,700 men in US and 62,400 men in 5EU and Japan die from prostate cancer annually<sup>3,4</sup>

(1) Saad, Prostate Cancer Prostatic Dis. 2021; (2) Scher, Plos One 2015; Leith, A. et al. 2022; George, D. J. et al. 2022; NCCN Guidelines for Prostate Cancer Version 1.2023; (3) American Cancer Society, Cancer Facts & Figures 2023; (4) Wang, Front. Public Health, 2022; Abbreviations: mCRPC = metastatic castration resistant prostate cancer; HRR = homologous recombination repair 1L = first line of therapy; 2L = second line of therapy; ADT = androgen deprivation therapy; AR = androgen receptor

#### Limited Benefit for 2L HRR- mCRPC Patients After Treatment with AR Inhibitor

Significant need for better therapeutic options

(1) Beer Eur Urol. 2017; (2) Ryan NEJM 2013; Ryan Lancet Oncol 2015 (3) Kellokumpa-Lehtinen Lancet Oncol. 2013, time-to-treatment failure reported; (4) Crabb J Clin Oncol 2021; (5) Attard J Clin Oncol 2018; (6) Sweeny Clin Cancer Res 2022. Abbreviations: HRR = homologous recombination repair; AR = androgen receptor

#### Combining a PAM Inhibitor with an AR Inhibitor has Strong Scientific Rationale

Biological parallels between mCRPC and HR+ ABC – PAM and hormonal pathway drive progression <sup>1</sup>

#### PI3K/mTOR + AR Inhibition Treatment Rationale

- Favorable clinical data in mCRPC with PAM inhibitors provides "proof-of-concept" of benefit of combining a PAM and AR inhibitor in 2L setting
- Gedatolisib's clinical results in breast cancer correlated with strong activity in nonclinical tumor models
- Gedatolisib exhibits similar potency and efficacy in prostate cancer cell lines as those reported in breast cancer cell lines

celcuity

 Xenograft data in PR models is consistent with in vivo data – gedatolisib exhibits anti-tumor effects independent of PTEN or AR status

(1) Carver et al, Cancer Cell 2011; (2) Mulholland et al, Cancer Cell 2011; (3) Crumbaker et al, Cancers 2017

# **CELC-G-201:** Phase 1b/2 Trial Design Overview

Evaluating gedatolisib combined with darolutamide, a potent next generation androgen receptor inhibitor

Enrolled first patient Q1 2024 and expect to announce initial data 1H 2025

## **Clinical Trial Results Provide POC for PAM Inhibitors in 2L mCRPC post ARi**

Less potent PAM inhibitors combined with AR an inhibitor reported favorable results

Study Regimens	Line of Therapy	Patient Population	N	Overall Results (Months rPFS)	Comments
<b>Samotolisib</b> (PI3K/mTOR) + Enzalutamide vs. Enzalutamide <sup>1</sup>	2 <sup>nd</sup> Line prior abiraterone	All	129	<b>10.5 vs. 5.5 months</b> ( <i>HR</i> = 0.64; <i>P</i> = 0.03)	<ul> <li>Samotolisib efficacious despite only modest PI3K-α and mTOR potency</li> </ul>
		AR-v7- negative	103	<b>13.2 vs. 5.3 months</b> ( <i>HR</i> = 0.52; <i>P</i> = 0.03)	<ul> <li>Results in PTEN wild-type patients reflect benefit of mTOR inhibition</li> <li>Gedatolisib vs. samotolisib <sup>3</sup></li> </ul>
		PTEN wild-type	60	<b>13.2 vs. 3.6 months</b> ( <i>HR</i> = 0.49; <i>P</i> = 0.07)	<ul> <li>7X more potent overall; 100x for mTOR</li> <li>More cytotoxic</li> <li>Drug is not under active development</li> </ul>
<b>Ipatasertib</b> (AKT) + Abiraterone vs. Abiraterone <sup>2</sup>	1 <sup>st</sup> Line	All	1101	<b>19.2 vs. 16.6 months</b> (HR = 0.84; P = 0.04 )	<ul> <li>Efficacy limited to PTEN loss patients</li> <li>Limited response in PTEN functional patients</li> </ul>
		PTEN loss by NGS	209	<b>19.1 vs. 14.2 months</b> ( <i>HR</i> = 0.65; <i>P</i> = 0.02)	<ul> <li>Elimited response in PTEN functional patients demonstrates role mTOR plays as resistance mechanism to AKT inhibition</li> </ul>

#### ~12 Sites Across US and Europe

# Additional Early Phase Clinical Data

### **Gedatolisib +** Paclitaxel + Carboplatin in Patients with Solid Tumors (N=17)<sup>1</sup>

65% ORR in all patients, 82% ORR in patients with ovarian cancer

- Ovarian Cancer (N=11)
  - ORR: 82%
    - Clear cell ovarian cancer (CCOC) (N = 10)
      - ORR: 80% 5/10 PR, 3/10 CR
    - Low grade serous ovarian (N=1)
      - 1/1 PR
- Other solid tumors (N= 6)
  - ORR = 33%
- Median PFS = 6.35 months (95% CI 4.6-11.11)
- Median duration of response = 7.6 months (95% Cl 1.9-13.4)
- The CCOC data compares very favorably to ORR for platinum therapy reported in platinum-naïve CCOC patients 25%-50%
- CCCO accounts for ~15% ovarian cancers in Asia
- Will assess likelihood other ovarian sub-types may benefit from gedatolisib + platinum therapy

(1) Columbo 2021 CCR

## Gedatolisib + Trastuzumab Biosimilar in 3L<sup>+</sup> HER2+ ABC Patients (N=17)

59% ORR and 83% clinical benefit rate

\* Target lesion decreased by 63% but a new leptomeningeal seeding occurred.

- o 10 of 17 (59%) showed partial response (PR)
- o 4 of 17 (24%) had stable disease (SD)

• Median duration of response 7.1 months

Kim 2022 SABCS. Note: Data presented is from an interim analysis of data as of a cutoff date of October 30, 2022, representing a database snapshot, and may change based on ongoing routine data monitoring and enrollment.

# **The Celcuity Opportunity**

Significant untapped potential to effectively treat PAM pathway involved cancers

• Gedatolisib's differentiated MOA and PK profile result in a highly potent, cytotoxic, and well tolerated PAM inhibitor

Very compelling data in 1L (mPFS 48 months) and 2L (mPFS 12.9 months) patients with HR+/HER2- ABC
A Phase 3 study in 2L patients is enrolling and a Phase 3 study in 1L patients is expected to begin enrolling in Q2 2025

- 3
- Strong scientific rationale to develop gedatolisib for prostate cancer indications
- Parallels between breast and prostate cancer interdependent activity between PAM pathway and hormonal pathways

- Uniquely positioned to advance multiple potential blockbuster indications in breast and prostate cancer
- Pro forma cash, cash equivalents, and short-term investments of \$293M as of Q1 expected to fund operations through 2026<sup>1</sup>

Celcuity is focused on unlocking the potential of treating cancers that involve the PI3K/mTOR pathway

Our third-generation cellular analysis platform unravels complex oncogenic activity molecular tests can't detect.

We harvest these insights to develop new targeted therapies for cancer patients
